

### compare our frames

At Extreme Marquees, we use 6005 T5 aluminium alloy in the production of all our folding frames. This is a new aluminium alloy class designed with both strength and aesthetics in mind. It combines the strength of the toughest alloys in the same class without sacrificing the quality finish found in lower strength alloys. 6005 T5 Alloy is exclusive to Extreme Marquees. Our competitors have sacrificed strength for the polished finish of the structurally inferior 6063 Alloy.

### compare our fabric

Extreme Marquees supplies only the finest quality materials for our marquee products. When it comes to fabric, we offer the choice of either quality polyester or imported 100% PVC. Polyester provides a light and cost effective material for both roof and walls. PVC is a heavy duty, durable fabric that provides a cooler shade and a better surface for custom printing.

Lightweight Fabric  
 UV Protected  
 Waterproof  
 Highly Durable  
 Cool Under Direct Sun  
 High Quality Printing Surface  
 Imported Belgian Solvin® Fabric
